December Meeting Women's Institute

The Champion Women's Institute held their regular monthly meeting at the home of Mrs. D. D. Farmer on Tuesday afternoon, December 13th. There were sixteen members present. This being the annual meeting, the following were elected to fill office in 1933:

Mrs. R. I. Baker, president;
Mrs. D. Chamberlain, first vice president;
Mrs. D. Watkins, second vice-president; Mrs. J. S. Alexander, secretary; Mrs. W. Ulrich, treasurer; Mrs. Edna Farmer, Latif and Stephenson, directors. Convener of Standing Committees, Child Welfare and Public Health, Mrs. J. H. Bastin; Education and Better Schools, Mrs. E. I. Baker; Legislation, Mrs. J. N. Boushier; House hold Economics, Mrs. Peter Dawson; Canadianization and Immigration, Mrs. D. Smith; Agriculture, Mrs. D. Watkins; Canadian Industries, Mrs. W. Ulrich; League of Nations, Mrs. B. Hummel. A Benevolent Committee was appointed to dispense Christmas cheer to needy families in the community, and \$10 was donated to the school children's Christmas Tree. The president, Mrs. R. I. Baker remarked on the spirit of unity and goodwill shown by the members throughout the year, and thanked all for their readiness to help in various ways. At the conclusion of the business proceedings, carols were sung, led by Mrs. McLeod's piano solo by Miss Geraldine Farmer enjoyed, and Christmas gifts exchanged. Mrs. Ulrich, being the recipient of the prize for the prettiest wrapped parcel. Delicious refreshments were served by the committee, Mrs. D. Smith and Mrs. Goodnight.

Elects Officers

Champion Lodge A. F. and A. M. elected the following officers at their last regular meeting held in the community hall:

W. M., J. Long; S. W., H. Smith; J. W., H. Higgins; treasurer, J. Collins; secretary, G. Dupre; tyler, J. D. Henderson. The other officers are appointive.

Big Time is Had at Party

A delightful surprise party was held Friday evening, when a number of young people gathered at the home of Mr. and Mrs. A. Hopkins. The evening was spent in games, singing and dancing. Among those present were: Misses Gill, G. Granlin, I. Miller, E. Vanbesien, I. Collins, B. Schooley, R. Anderson, G. Anderson and F. Ulrich. Messrs C. C. M. Smith, P. Bastin, B. McCallough, G. Eber, A. Ulrich, P. Pusey, J. Miller, D. Stephenson, H. Stephenson, D. Campbell, M. Caldwell, A. Latif, T. Holm, G. Higgins, F. Little, J. Fraser, W. Anderson and H. Taylor.

The dance, held Friday night at Alston was poorly attended due to the inclement weather. The Knights of Rhythm were in charge of the music.

Commences Play On Wednesday

The President and vice President's Competition will open the Curling season in Champion on Wednesday night at 7 o'clock. Skips J. Collins, Art Jopling and G. Orr will represent the president and skips E. Clapp, C. McLean and A. Baker will represent the vice president.

The Executive Committee met in the Chronicle office Monday night and appointed H. T. Lamont to represent the club at the Little Bow Curling Association's annual meeting to be held at Vulcan on Friday, December 12th.

The rinks selected for the curling season 1932-33 were as follows:

Skip, C. McLean, R. D. Farries, P. Patterson, C. Desson.
Skip, F. Clapp, H. T. Lamont, Ike Fisher, Louis Fath.
Skip, Geo. Orr, Art Woodhill, Neil McLeod, A. McCollough.
Skip, A. Baker, Rev. P. Dawson, R. Hummon, U. S. Alexander.
Skip, Art Jopling, Harvey Jopling, F. Clever, M. Moffatt.
Skip, J. Collins, P. Gatenby, W. Hargis, M. E. Hamilton.
Skip, G. Guez has, with the help of the weather man, prepared excellent sheets of ice, so when these teams step on the ice the curling classic should be of a high order.

— SQUARE DRAW —
Thursday 15th—Collins vs Baker, Clapp vs McLean.
Friday 16th—Jopling vs Orr, Collins vs McLean.
Monday 19th—Baker vs Orr, Jopling vs Clapp.
Tuesday 20th—McLean vs Baker, Collins vs Clapp.
Wednesday 21st—Orr vs McLean, Jopling vs Collins.
Thursday 22nd—Baker vs Jopling, Clapp vs Orr.
Friday 23rd—Collins vs Orr, McLean vs Jopling.
Tuesday 27—Clapp vs Baker.
All games begin at 8 o'clock.

Good Turnout at

Bridge Party

Miss Augusta McNaughton was hostess at a bridge party Friday evening, at the Fire guard school, when she entertained guests from Fireguard and Champion in order to raise funds for the Christmas concert. Baskets were sold, Mr. G. Voisey acting as auctioneer. The financial returns were very satisfactory. The honors in bridge went to Mrs. Voisey and Mr. Vann, and Mrs. McDougall and Mr. Orchid.

K. R. McLean, R.O., of McLean & Anderson, Night Specialist of 24-28 Ave West, Calgary, will make his monthly visit to Champion, Friday, Dec. 23rd at the Drug Store.

THURSDAY, Dec. 18, 1933

NOTES AND COMMENT.

Alberta Wheat Pool Reports

For Fiscal Year Ending July 15, 1932.

Showed net operating earnings from elevator system of \$1,133,352.49.

Appropriated \$524,622.04 for depreciation.

Appropriated \$222,801.73 for payment of interest to Alberta government on bonded guarantee.

Transferred net earnings of \$875,738.03 to reserves.

Paid \$250,000 on Pool Terminal No. 1, Vancouver.

Paid \$210,836.42 to growers as balance due on 1928 final payment.

Improved current liquid position from \$2,704,344.19 to \$3,261,111.13, showing an increase of \$556,766.94.

Handled 41,591,781 bushels of grain through Alberta Pool elevators, as compared with 30,822,841 bushels handled during previous year.

Organized sales department and operated entire organization, including this new department, at a lower cost than the previous year.

While harvest was in progress, changed over from a pooling to an optional system of grain handling.

Maintained 430 country elevators and 4 terminals in first-class physical condition.

In face of disorganization and public criticism, retained the confidence and support of a great majority of Alberta Pool members.

Obtained a considerable volume of grain handling from growers who had never belonged to the Alberta Pool.

Many Women take Homesteads

Almost one-third of the homestead lands taken up since July 2, 1901, in Alberta, under the new provincial government regulations, have been secured by women.

When Alberta took over its own lands, the regulations regarding homestead rights were changed to provide for a three-year's residence in the province before entry for homesteads could be made, and also to permit women, whether married, single, or widows, to take up land.

As a result the number taken by women since then has been 2,292, compared with 5,012 taken by men.

Annual Buffalo Round-up

The annual slaughter of surplus buffalo in Wainwright national park, where is quartered the last remaining large herd of buffalo on the continent, has been under way, more than 1,200 being killed off.

A large quantity of the meat is shipped to eastern markets. Some of the meat is being made into pemican for the Indians and Eskimos of the far north.

Alberta Turkeys for Britain

Alberta being the leading province in Canada for turkey production, the usual large shipments to outside markets for the fall and Christmas trade have commenced.

Producers annually ship some 75 carloads from the province to these markets. This year a shipment has already been made to the British market.

Coal Production

Some stimulus to the coal industry in Alberta is indicated in the figures for production for the 10 months of this year ending October 31, as compared with the same period of 1931.

This year's production for the period has been 3,736,975 tons as compared with 3,435,961 tons for last year's period, an increase of 300,014 tons.

In October alone there was an increase of 144,000 tons over the same month of last year.

Lower the Cost of Producing Beef

There is a cost line running through every animal on your farm

Get More Out of Feed Crop

BLOWS YOUR ROUC ON GROUND FEEDS WHERE YOU WANT THEM

Fully 50,000 farmer owners of Letz Mixed Feed Makers have positively proved that you can lower the cost of producing beef, pork, mutton and dairy products with the Letz System of Home Crop Feeding. Their results show that Letz Mixed Feed Makers will:

- Save 25% to 30% of present feed cost by utilizing waste.
- Reduce up to 50% of your present feed crop damage for each crop.
- Increase milk and meat production up to 25% through better feed preservation.
- Save up to 25% of labor in handling feed crop.
- Improve health and condition of all farm animals.

Come in the next time you are in town and let us show you how the Letz Mill will solve your feeding problem for you.

Efforts Being Made To Develop Reward Wheat to Replace Garnet And Retain Milling Qualities

The great victory won by Hereward in the Chicago grain show, with his strain of Reward wheat, may be another milestone in Canada's effort to produce a wheat that will surpass all other blends in meeting the needs of the farmers in the northern portion of the prairie provinces. That winning of this coveted prize does not in itself settle the question, it was explained by cereal experts at Ottawa.

What the wheat wants is a wheat that will be as early ripening as Garnet, as prolific as Garnet, and have as good milling qualities as Marquis. There is no doubt about the milling qualities of Reward.

It has everything in the way of quality, cerealists agree. For two or three years it has been at the top of the top or at the top, both in appearance and milling qualities. In some districts where it has been grown in the wheat it has ripened as early as Garnet, an attribute which has made the latter no popular where crops run the danger of early frosts.

The productivity of Reward in spots have been equal to Garnet, but not on the average, and farmers want to get as many bushels as possible per acre. That is the reason why Garnet has been so popular, despite the fact that it cannot grade as No. 1, because of its milling qualities.

Over a year the Reward wheat has been over Garnet wheat that it should be graded separately so that overseas millers would not be misled into thinking they are buying No. 2 Marquis and getting Garnet.

Only a short time ago the announcement came from Winnipeg that Garnet would be graded separately next crop year. So far the growers of Garnet have fought this and a petition, and the struggle was staged in the common agricultural committee last spring, which resulted in a decision in the matter being postponed until next year.

In the meantime intense efforts have been made to breed a Reward wheat that will take the place of Garnet and retain its great milling qualities. The experimental farms, under the direction of Dr. S. H. Archibald, have supported the effort to breed a new strain of wheat, in the search after such a superior wheat, and in this great enterprise, Hereward has contributed no small part.

Used To Figuring Odds

Bookmaker Instantly Solves Problem Which Took Professor Six Hours The university mathematics professor is fast and clever at figures, of course, but it takes a bookmaker for real speed.

A reporter at Louisville, Kentucky, querying at random, asked— "What are the odds if a cutter wagers to turn an ace, jack or deuce in three cuts of a 52-card deck? Many answers were given, ranging from 9 to 4 in favor to 13 to 9 against."

A Louisville university mathematics professor said 9 to 4. Several hours later he submitted a 500-word answer showing the odds at 1.197 to 1.000.

The city editor of the newspaper employing the reporter telephoned a bookmaker. "Hold the phone a minute," he said. "In a flash replied, '1.197 to 1.000.'"

"Now, it wasn't hard," the bookmaker said. "We figure odds like that a dozen times an hour."

Fans From Many Countries

Extensive Collection Shown At Antique Exposition In Chicago

An Egyptian fan, preserved in fan-shaped glass frame, and one that may have been used by Cleopatra while beguiling Marc Antony, is on display in Chicago among other antique collection of fans from many countries at a hobby, antique and collectors' exposition.

The fan has delicate paintings of Cleopatra on parchment mounted on tortoise shell.

Other exhibits include fans which can be converted into opera glasses and fans which are easily transformed into wicked looking daggers.

Seven of the sons of Moulay Ismail, emperor of Morocco from 1672 to 1727, assumed the title of emperor.

Barber: "How is it your hands are no dirty?"

Apprentice: "Nobody had a shampoo today."

W. N. U. 1972

Trade With Fiji Islands

Governor Fletcher Hopes To Develop Banana Trade With Dominion

"We are looking for increased trade with Canada," said C. H. Fletcher, K.C., C.M.G., C.B.E., governor of the Fiji Islands, on his arrival at Victoria by the liner Niagara from Buva.

"We are hoping to develop our banana trade and in this connection I propose to investigate the possibilities here," added the governor.

"There are no finer bananas grown in the world than in the Fiji, and there should be a good market for this fruit in Canada," he said.

"Canada takes a large percentage of our sugar, and she has always treated us fairly in trade. The preference on sugar is quite a big one, and for this we are most grateful. It makes quite a difference to a small colony like ours."

The Fiji has enjoyed a record sugar crop this season, totalling some 140,000 tons, as compared with the previous harvest crop of 118,000 tons. Much of this raw sugar is refined in British Columbia.

British Kip Leather

Is Now Exempted From the Exchange Dump Duty

As a first-step in implementing the Anglo-Canadian trade agreement, which provides that the Canadian Government shall remove the special import duties against British kip leather as soon as possible the national revenue department has issued an order exempting British kip leather from the exchange dump duty.

Kip leather is one form of raw leather, and is not listed, individually, in the trade returns. The entire imports of this class of leather, however, in the fiscal year ended March, 1932, were \$620,350, of which \$122 came from Britain. There does not appear ever to have been any substantial importation from the United Kingdom. The bulk of the leather comes from the United States and Germany.

Winnipeg Newspaper Union

Has Taken the Camera

By Ruth Rogers

One of the most striking effects of high altitude noted by Dr. Schneider was the impairment of mental faculties. During the war aviators were often known to make two exposures on one plate while photographing. Unaware of this, they would later blame the camera.

Dr. Schneider is professor of biology at Wesleyan University. His interest in the effects of altitude on human beings dates from the time he served as a member of the Colorado College faculty at Colorado Springs, in the shadow of Pike's Peak, from 1903 to 1919. He was a psychologist at the government school of aviation medical department at Mitchell field from 1919 to 1926.

"Can anyone in the class give me a more elegant rendering of 'the sap rises'?"

"The loob gets out of bed."

Common sense is frequently uncommon wisdom.

679

THE NEW VOUGHIS HERBERT AND SCARF OF WHICH PARIS IS SO FOND

Match your heart to your heart. If you want to appear smart this season.

The scarf may be worn in two different ways, tied in ascot style or knotted in how effect at the shoulder. The scarf is quite one-sided which makes it so utterly fascinating.

It is a lovely set for travel, for resort and for the college miss for early fall wear.

Soft woollens are smart.

Style No. 679 comes in sizes 21, 22 and 23 inches head measure. Size 22 requires 1 yard of 30-inch scarf and 1/2 yard of 30-inch contrasting material.

Price of pattern 20 cents in stamps or coin (note is preferred). Wrap coin carefully.

Peculiar Effect of Altitude

Lack of Oxygen Affects Brain Centres Opinion Of Biology Professor

"Altitude jags" have been made the subject of an intensive study by Dr. Edward Schneider of Wesleyan University, Middletown, Conn., who recently explained the causes of the phenomena to faculty and students of the University of Colorado medical school at Denver.

Aviators and mountain climbers who ascend to great heights suffer some peculiar physical and mental effects, according to Dr. Schneider. In many cases they eat in every way like alcoholic drunkards.

Dr. Schneider said that during the war aviators, far above the earth, would often waste to enemy fliers instead of attempting to shoot them down.

Lack of oxygen in the atmosphere at high altitudes is responsible for its peculiar effects, Dr. Schneider said. Headaches are usually the first noticeable effects of the rarefied atmosphere.

Using huge tanks, from which the air has been pumped, Dr. Schneider has been able to create artificial conditions similar to those found at great heights. He has found that there are two types of persons affected by altitude—fainters and non-fainters. Lack of oxygen affects the lower brain centres of the fainters and the higher brain centres of the non-fainters, according to Dr. Schneider's experiments.

In high altitudes, Dr. Schneider has found, the body releases oxygen and alkalis develops in the system. This gives the body an increased oxygen-carrying capacity.

One of the most striking effects of high altitude noted by Dr. Schneider was the impairment of mental faculties. During the war aviators were often known to make two exposures on one plate while photographing. Unaware of this, they would later blame the camera.

Dr. Schneider is professor of biology at Wesleyan University. His interest in the effects of altitude on human beings dates from the time he served as a member of the Colorado College faculty at Colorado Springs, in the shadow of Pike's Peak, from 1903 to 1919. Interesting Experiment Carried On by Department of Interior in Preserving Wild Life of Canada

Learning To Fly

Must Learn To Operate Machine in Full Flight Before Mastering Art of Landing

It may seem rather like putting the cart before the horse that the pupil in flying is taught thoroughly how to handle a machine in full flight before he even knows how to take off or to land, writes Mr. Alan Warwick, in Pearson's Magazine.

The point is, of course, that at several thousand feet in the air errors of control can be made more or less with impunity. There is ample time for the pupil to correct them, or, if he gets himself tied up into knots, the instructor can straighten things out.

Landing a machine, or taking-off, on the other hand, gives no such latitude. The machine is very near the ground, hard, hard ground. Therefore, both these phases of flying an airplane—more particularly the landing—call for a precision of judgment that the pupil obviously cannot possess until he has become thoroughly familiar with the controls, a familiarity he only gains in mid-air.

To the beginner it may well seem that the delicate work of landing a machine—achieving the ideal three-point landing, tail-sit and two wheels setting gently on the ground together—is something far too difficult for him ever to accomplish. But as his lessons proceed he soon modifies his view. Such is the confidence and self-reliance he acquires when at last he comes to mastering the take-off and landing, the control-column has become almost part of himself, and he finds that he problems well within his compass.

Before taking the tests for his 'A' license, the new pilot must have flown at least three hours solo. The tests themselves, in addition to showing flying skill, include a simple medical examination. The additional questions put by the medical examiner are searching enough.

The qualifying pilot must also display knowledge of the elementary rules relating to air traffic. For instance, he must know the correct method of approaching a landing ground, and what he has to do when passing another machine in mid-air.

As one quickly realizes, the 'rule of the road' in mid-air is as important for the safety of aircraft as are rules and regulations for road traffic. Being of a three-dimensional nature they are rather more complicated.

What's In A Name

New Words For Occupations Do Not Affect Efficacy

Was there a sound reason in a recent mention of the fact that life insurance is no longer sold by agents but by "estate conservators"? For two years the ironic observers that curious animal, the business man, have derived unalloyed amusement from his attempts at verbal gymnastics.

Undertakers have become morticians, real estate agents have become realtors, press agents have become counsellors on public relations, plumbers have become sanitary engineers, and in general sailing has become the financial equivalent on plan.

Such reachings out for bigger and shinier words, if they call for criticism at all, would be properly attacked by the conservatively minded, for whom the good old words of their fathers are good enough.

Charity should be accorded the effort of the business man to wrench himself out of old grooves. The revolutionary urge is essentially that of the "junior communications engineer," formerly the messenger boy, in the "modern" poetry and flunkey and in the foreign and antique names for shoes and inn—St. Catherine's Standard.

England A Clean Country

England is the cleanest country in Europe, according to statistics published recently in Prague, Czechoslovakia. The figures show an amount of soap used, English people use 21 pounds per capita a year. Germans are second with 15 pounds per person. People of Czechoslovakia are third with 11 pounds per head.

Rural Automatons' telephone exchanges are being opened in Northern Ireland.

"What is your occupation?"

"It isn't an occupation, it's a pursuit. I'm a bill collector."

With the establishment of a small herd of twenty-five wapiti (commonly known as elk) from Buffalo National Park, Alberta, in the Pembroke Crown Game Preserve near Petawawa, Ontario, the department is carrying out an interesting experiment in preserving the elk to their former numbers as one of the principal big game animals of the Dominion is another important chapter in the history of wild life conservation.

The saving of the buffalo from extinction, the protection and propagation of the antelope, and the sanctuary given other species of our native wild life by the establishment of national parks and other game reserves is preserving for future generations the wild life resources of this country.

The department of the interior, in its efforts to preserve the elk, is carrying out its achievements in other lines of wild life conservation. The twenty-five animals—five males and twenty females placed in the Ontario government's preserve near Petawawa were drawn from a herd of over 100 in Buffalo National Park, Alberta, administered by the National Parks of Canada, department of the interior.

The nucleus of that herd was a group of about half a dozen wapiti, with a few deer and moose, were found enclosed in the park after the erection of the fence by the protection which is given all wild life in these national preserves, the elk increased in a surprising manner. In 1926, there were over 100 head in the park, while five years later this number had risen to almost 300. Buffalo park now contains more elk were added to the herd, in addition to over 6,000 buffalo, 2,500 moose deer, and numerous other species of mammalian wild life.

A small outfit for hunting, which is provided by the loan or gift to conservation societies or governments of one or more individuals of these species, is a very important part of their introduction, having been secured. The Pembroke Reserve, located in the county of Renfrew, Ontario, was created by the government of Ontario as a fish, game and game sanctuary and contains an area of about 360 acres, completely surrounded by a strong wire fence.

The wapiti or elk were once the most widely distributed of the deer family in North America but in common with many other species of big game it has suffered the inevitable result of territorial development and improvement. In 1900, the number of these handsome animals were slain merely for the sake of their teeth, which were used for purposes of ornament. The range of the elk at one time occupied the greater part of the central region of the North American continent, including the southern parts of Ontario and Quebec, but today only scattered herds exist outside the national parks of Canada and the United States.

Degree For Housewives

Schools in Germany Give Degree Of Mistress of Housekeeping

Housewives of Germany are being recognized and given the degree of "Mistress of Housekeeping." These have been established in Berlin and other large cities schools for housewives, with

To Keep One's Balance

In the years prior to the great market crash in the Fall of 1929, when practically everyone was employed and wages high, crops good and prices high, both import and export trade at a record, the lawless, lawless, and activity manifest in every line of business, any person who gave voice to a note of warning, who urged a slowing up of the pace at which goods were being produced and sold on the installment plan, who offered criticism of the reckless manner in which people of all classes were going into debt because credit was easy, who expressed the opinion that our industrial structure was being expanded far beyond the needs of the country—such a person was regarded as a confirmed pessimist, a "black and blue" non-progressive, almost disloyal as a citizen because his viewpoint and attitude was regarded as detrimental to the advancement and welfare of the country.

In three short years the attitude of the general public has swung to the other extreme. Because hundreds of thousands are out of work, wages have been sharply reduced, crops have failed or been reduced in volume, prices have dropped below costs of production, the trade of the country has been all shot to pieces and imports and exports cut in half, with the railways in the doldrums, with every industry and business struggling to keep going, and with the masses of the people now confronted with the obligation of paying those debts they so cheerfully contracted only a few short years ago—because of these things any person who may now sound a note of courage who declares that the depression is, after all, only temporary in character, that business will revive, workers again be employed, good crops and better prices come, and prosperity be again established, is laughed at as a hopeless optimist, a dreamer of dreams, or he is derided as an upholder of Capitalism, one who is incapable of learning anything, who is opposed to advancing and improvement in methods, and who lacks all sympathy with those who are suffering at the present time. In a word, it is the person who now looks to the future with hope and courage that is regarded almost as lacking in patriotism.

This swinging from one extreme to another is characteristic of people. So many of us have what has been termed "a one-track mind." We follow the crowd, fall to think for ourselves and exert our individuality, are swayed by the psychology of the masses. When the crowd is "in" for "queer" or "different," and pointed at as a pessimistic crank at one time or an optimistic crank at another time, when, as a matter of fact, we are but remaining normal human beings, refusing to be stampeded one way or another.

When public opinion thus swings en masse to one extreme or another, the inevitable effect in any democracy is that governments are forced into the taking of actions which the considered judgment of the members of those governments would not make, but which they cannot be prevented from opposing in their calmer moments, and which they later do oppose and blame the governments they themselves forced into the taking of such actions. People individually and collectively can be protected and safeguarded to some extent from making mistakes, but they cannot be prevented from making them. Once made they must pay the price of their mistakes. Nobody and nothing can save them from the obligation to pay.

So it is that at the present time, when masses of the people refuse to see any light ahead, any hope for the future, and are obsessed with the idea that the present depression is not a temporary, an abnormal condition, but that it has become chronic and will remain as a permanent condition until everything is torn up by the roots and a new start made all over again, policies are being adopted and demands made in the light of existing difficulties as if they were, in truth and fact, a permanently established condition.

Such an assumption is false, and policies grounded in a false assumption can have but one result—the making of disastrous blunders if effect is given to them. Times are difficult, but that does not mean they will permanently remain so. Problems calling for solution are many and great, but they are not insurmountable. Changes are necessary, but they are being made every day; always have been and always will be because this is an ever-changing world. Reforms of many kinds are called for, and they, too, are being effected. Changed conditions create the necessity for reforms. They have always been effected. The worst periods in the world's history when the cause of reform seems to lag, almost stop, but it never stops. The movement is ever onward and the direction is ever upward.

Facing the danger of forming a pessimistic crank, we have no hesitation in saying that the present condition is not a permanent condition, not a normal one. We go further and say that for people to regard the existing condition as a normal condition, to adopt policies based on such a false assumption would be just about the greatest blunder they could possibly make. They would find out, when it was too late, that they had made a mistake greater and more serious in its results than those other mistakes which have landed the world in its present state.

If the democratic ship of the future is to sail, it must man the pumps and close up the leaks; not run the ship on to the rocks and smash it up. If our social and economic structure has developed weaknesses, if cracks have appeared in its foundation and walls, if it has shifted somewhat out of plumb, we should have means, the ability, the energy to repair the damage wrought, and are not forced to the extremity of blowing up to the whole structure or tearing it to pieces.

And because we have all too optimistic three, four and five years ago—and entered upon policies which were really very pessimistic, we are not just apt to be making the second mistake of being too pessimistic now, but are embarking upon equally mistaken policies, but more serious in their results because they are of a destructive, rather than of a constructive, character.

Conditions are not normal. Because they are not normal, our outlook on life is not normal. And when neither conditions nor ourselves are normal is the worst possible time to decide vital issues affecting our whole future.

Treasured Heirloom

Famous Telescope Used By Nelson At Trafalgar Is Sold

The famous nation parlors of Christie witnessed recently the selling of the historic telescope used by Admiral Nelson in the strategic battle of Trafalgar. The telescope, which had been handed down for many years as an heirloom, was sold for £1,350 guineas (about \$7,500).

Another historic article was taken back to the same naval battle was the silver watch that was presented to Midshipman Villard after he shot the shipboarder who had threatened wounded Admiral Nelson. The watch was sold for 135 guineas, about \$533.

Reconstruction in the destroyed Chapel area of Shanghai, China is proceeding very slowly.

Headaches and Dizzy Spells Nerves In Bad Condition

Mr. Neil Crawford, Hamilton, Ont., writes: "My nerves were in such bad condition I found it almost impossible to get a good night's sleep. I was also bothered with headaches and dizzy spells."

I tried many different remedies, but they did not seem to give me much relief, but after I had taken Milburn's Heart and Nerve Pills I had hardly before the change they had made in my condition.

For sale at all drug and general stores, put up only by The T. Milburn Co., Ltd., Toronto, Ont.

U.S. Deportation Law

Move To Submit Bill To Lessen Severity Of Existing Legislation

A bill mitigating the severity of existing United States deportation laws, under which 40,000 persons have been expelled from the United States in the last two years, is ready for submission to congress. It is drafted by Reuben Oppenheimer, Baltimore lawyer, who last year wrote the Wick-Edman law enforcement, accusing the labor department of unfair and arbitrary practices in its drive to rid the country of undesirable aliens.

Labor members of congress have more recently voiced two criticisms of the department's policy. They say that aliens have been sent back to face firing squads or long jail terms for political offences, as for instance anti-Fascists to Italy and counter-revolutionaries to Russia. It is also charged that aliens have been arrested, held incommunicado and deported after secret hearings before government officers at which they had no opportunity to be heard.

The bill written by Mr. Oppenheimer sets up a board of alien appeals to which all aliens threatened with deportation will be publicly presented in case with a lawyer's aid. It also provides that an alien whose deportation to his native land would endanger his life or liberty may go, at his own expense, to any country willing to receive him.

Of the 40,000 people deported since the beginning of 1921 about 5,000 were returned to Canada. Aliens recently held incommunicado at Buffalo for deportation, according to articles published in the press of that city, included a number of Canadians.

Fast Steamship Service

Project Advanced For Rapid Transportation Between Europe and America

Plans for formation of an international syndicate to carry out the idea that the present depression is not a temporary, an abnormal condition, but that it has become chronic and will remain as a permanent condition until everything is torn up by the roots and a new start made all over again, policies are being adopted and demands made in the light of existing difficulties as if they were, in truth and fact, a permanently established condition.

Speaking at Dublin, Senator John Glendinning, chairman of the Irish Transport Corporation, which is mainly responsible for the project, declared a prospectus would be issued immediately. The capital needed for, but in preparation was \$125,000, he said. Senator Glendinning said great interests had been aroused in the United States and had been never ready to New York to confer with prominent bankers.

The project involves construction of first-class combined airport, harbor and port facilities at Galway and Halifax, the respective steamship terminals for Europe and America. The air service will radiate from Galway to Britain and the continent, and from Halifax through the Dominion and to the United States if the scheme eventually is carried out. The governments of the United Kingdom, Ireland, and Canada, were apprised of the scheme.

Automatic Gear Changing

New Device For Cars To Be Patented

A car which changes its own gears is being sponsored by Mr. Vincent Bendix, an American motor engineer, who has been visiting London for the motor show. The driver never needs to touch the gear lever or clutch pedal.

The device was invented by a young man called Marcus, who is in Mr. Bendix's firm. The secret of its operation is being jealously guarded until the patents have been negotiated. So far there is only one car in the world fitted with the device—and that is owned by Mr. Bendix.

The driver can set the engine with the gear lever in "high" and the lever will change to its proper position of its own accord, making no more noise than a shift part of a perfect normal gear-change. The gears even change down of their own accord when the car comes to a halt.

New Hat For British Tommy

Fashion Has Devised Soft Headgear And Plus Fours

While the British public awaited American action on the war debts with a gloomy foreboding, the mother of a comedy was diverted with a comedy of a cap—or rather, of two caps.

As a part of a new spirit towards military efficiency, the English Tommy is to wear a soft hat and plus fours. But the fashion pundits of Whitehall have decreed just the opposite for letter carriers. The latter is to have a flat-topped cap of the type which was once termed in the army a bruderick.

Huskies In Discard

Airplanes Replacing Dog Teaming Out Of The Pas

Dog prices slumped at The Pas, Manitoba, to a new low level because of a beautiful team of huskies, pure harness and Alaskan sled, sold for \$15. There were five dogs in the team. They were the property of the provincial police, and were sold "on the bat."

They were bought by the Western Trading Company for a trapper at Churchill.

Three years ago this team would have sold for \$300. The sale has more than passing significance. Dog teaming out of The Pas is now coming to an end. The railways and aeroplane have put an end to freighting with dogs.

At present all signs point to great activity in the God's Lake gold country to the northeast. In other years many dog teams would have been put into service to handle freight and equipment.

For this winter there have been only a few calls for dogs. Prospectors and miners want to use planes. The trip from Mile 137 Hudson Bay Railway to God's Lake will occupy eight days with dog team. An aeroplane will do the same trip in a couple of hours. So dogs go into the discard.

Screenings For Fuel

Demand For Refuse As Feed Has Practically Ceased

One of the interesting effects of the present low prices for grain is shown in the fact that screenings which during periods of high price found sale even in the export market as a constituent of feeding stuffs is now being used for fuel. Demand for refuse screenings as feed has practically ceased and getting rid of this bulky and fast accumulating material was quite a problem for the city. Until a market was found for its use as fuel at heat and power plants in Northwestern Ontario, in Manitoba and even as far west as Saskatchewan.

Persian Balm—the one toilet remedy that the dainty woman desires to use. Leaves no stickiness. Swiftly absorbed by the tissues. Indelicately fragrant. Imparts a velvety loveliness to the complexion. Tones the skin. Soothes and banishes all unpleasant roughness or chafing caused by wind and other weather conditions. Makes hands soft and white. Creates an elusive, essential feminine charm. Persian Balm is indispensable to women of refinement.

His Interpretation

The Indian student, writing a letter to the superintendent of the mission, desired to end with the words: "May heaven preserve you."

Not being quite confident of the meaning of "preserve," he looked up a dictionary. When the letter reached the superintendent it ended with the words: "And may heaven pickle you."

Barber's Itch and Ringworms are relieved by the use of Douglas' Eczema Lintment, quick, easy, reliable. Relieves the most obstinate cases.

Wright: "Brown may have his faults, but he has the instincts of a gentleman."

Flight: "Do you think so?"

Wright: "I'm sure of it. When he flies his wife to bring her a bottle of cat he always gets up and opens the door for her."

The longest waves in the ocean are generally found in the South Pacific and sometimes attain lengths of 1,000 feet.

Babson says the depression will be worn out by 1934. So will we.

W. N. U. 1072

Missionary Believes

Dwarfs Disappearing

Returning to England from a lengthy study of the pygmy race in equatorial Africa, Father Louis Shebesta, noted Austrian missionary, believes this tiny race will disappear entirely.

According to Father Shebesta, there are not more than 20,000 pure pygmies left in Central Africa and these, together with semi-pygmy called Bahwas, totalling some 90,000 inhabit a territory covering some 100,000 square miles limited by the Juba, Lenda and Lindi rivers and distributed among some 333 tribes.

Very little, he says, those dwarf tribes have come under the dependency of negro tribes with whom they exchange game against cereals, fruits and arms.

The negro has come to look upon the pygmy as an inferior race and as slaves, Father Shebesta says. Also the meeting with the negro and subsequently the white man has rendered the pygmy familiar with alcohol and infectious diseases.

Nothing short of governmental or private initiative is able, in the opinion of Father Shebesta, to halt the downward trend of the dwarf race, which science and civilization are equally interested in preserving.

Decorated For War Service

Twins Were Wounded In Same Battle During War

For 45 years, William and Joseph Sebastian twins, have been doing interesting things together. Born at Lynchburg, Tenn, they went to the same schools and enlisted in Company E, 119th Infantry, 30th Division, in 1917.

They sailed for France on the same ship, were wounded in the same battle and returned home on the same ship.

Recently, the War Department decorated them with the Purple Heart for "military merit." The twins are automobile workers in Detroit.

Canada's Pure Bred Stock

In a report to the Minister of agriculture, A. F. MacVannell, chief registrar of livestock, states that a total of \$9,700 certificates for Canadian purebred livestock were issued during the fiscal year ending March 31, 1932. These were made up as follows: Cattle, 33,288; horses, 1,734; sheep, 13,330; swine, 10,139; foxes, 21,805; goats, 7,280; poultry, 1,811; and game, 128.

Cheapest of all Oils.—Considering the quality of Dr. Thomas' Electric Oil it is the cheapest of all preparations offered to the public. It is found in every drug store in Canada from coast to coast and all countries. It is the only oil that is being easily procurable and extremely moderate in price, no one should be without a bottle of it.

The average life of the man is ten years. Unfortunately his instinct to attend picnics unlimited is hereditary.

Coffee grown at Grand Comoro Island, off South Africa, is said to contain no caffeine.

Puzzle For Customs Officer

Age Of Cat Mummy Seems Question For Expert

Papers in London printed pictures of an Egyptian mummy cat, guarded by a customs officer, which has been held up at Crocydon pending proof it is more than 1000 years old, and so entitled to be admitted free of duty.

The animal, pictures show, is seated on its haunches, and appears about 18 inches in height. It is entirely striped of its wrappings, and so appears as natural as life, with whiskers and ears in perfect condition. The Cairo agent who sent the mummy alleges it is the most perfect specimen ever taken from an Egyptian tomb, and it is, at least 2,000 years old.

Customs officials admit they are not sufficiently versed in the burial ritual of ancient Egypt, and it will take an expert from the treasury to determine the age of the mummy—at least to determine whether it is below or above the century mark.

Protection Against Forgers

Paris Banks Think Performing Cuesques Would Help

Banks in Paris have just taken up the idea of performing as well as producing a performance against forgers. One of the private members' bill tabled for the consideration of the new Chamber of Deputies provides for such a measure. There have been many cases in France in which thieves have, by means of chemicals, removed the two diagonal lines and cashed the stolen cheque. The bill states that perforation will prevent this.

Miller's Worm Powders will clear the stomach and bowels of worms, no matter how many. They are not troubled by their ravages. The powders are sweet to the taste and no child will object to taking them. They are non-injurious in their composition, and while in some cases they may cause vomiting, that must not be taken as a sign that they are nauseating, but of indication of their effective work.

Building Giant Bridge

Largest One In Europe Will Be Constructed by Denmark

Denmark is preparing to construct what is believed to be the largest bridge in Europe. It will span the Storstrommen (Great Stream) between Sjælland and the island of Falster, and will be used by railways and vehicles. The total length will be 10,827 feet and the height 85 feet. The cost will total approximately \$8,723,000. Work will be started immediately and the structure is to be completed in 1940. It is the first link in the proposed route between Copenhagen and Hamburg.

French Commander Now A Private

Marshal Henri Petain, the "Savior of Verdun," and one of the world's greatest soldiers, has become a private in the ranks. The distinguished French commander has accepted membership as a private on the staff of General W. McK. Evans, commander-in-chief of the department of the Marne, in Verdun, United Confederate Veterans.

CHAPTER II.—Continued.

To be so plainly ignored by his own men when any matter of importance came up, made him appear a nobody. To have Baker issuing orders and getting a patrol ready without first consulting him, seemed to him a gross violation of discipline. He had formerly been forced to let Baker have his way in managing the post; but now, shocked at realizing how very little he himself amounted to here, and confident that his six months of experience made him capable of running the detachment himself, he had sworn he was going to come down on these men and come down hard.

But the secret and real source of his anger was a deep smoldering jealousy of Baker because of Elizabeth Spaulding. More clearly at every talk with her, he saw she trusted Baker, liked him, and was going to marry him. Her cool, incessantly, it saddened Haskell; and her comparison between him and a ninety-a-month sergeant cut his pride to the quick.

Pretty, cool, a little haughty, she was just the kind of girl who suited him, and was the only person here at Enlure where he could associate with. His admiration for her mounted, it had quickened with passion, it had become a fire in his blood—the first and only passion he had known. His life, formerly so leisurely and purposeless, had taken on an aim, a goal. That goal was to smash her engagement and wrest her away from Baker.

As Alan now hurried into the cabin, Haskell swung on him.

"Don't you know better than to come bursting into an officer's quarters without knocking and asking permission? Go out and try it again."

His words went past Alan unheeded. Alan's mind was no such a turmoil. . . . Jimmy murdered, Joyce alone there on the lonely snowy Alaska, those six handi strappers equipped with their loot. There was but one thought in his mind—to overhaul those two canoes before they were lost beyond all pursuit.

Forgetting even his salute, he came across to the desk. As though checked by the look on his face, Haskell did not repeat the reprimand. Instead he listened silently while Alan reported the robbery, murder, escape.

"They're heading up the Big Alyokas toward a muskox country along back there in the northeast," Alan explained quickly. "It's called the Thali-Azash, the Land of Many Waters. It's a thousand square miles of criss-cross waterway—lakes, channels, slow creek, and soup-thin bog all covered with flags and willows. They're heading for the Thali-Azash. That's why they staged the

robbery at the Alooka mouth—so they'd have a straight shot into that muskox. If they reach it we might never get them. I'm going to take the launch and the five men I've got."

Haskell stiffened. In sarcastic tones he interrupted: "You've got? Just a second, Baker. It would be a little better for me to give your report and possibly make suggestions and, then allow me, as officer commanding here, to issue orders."

Alan started at him in surprise. After all the long months of the winter past when he had initiated every patrol that went out, he was totally unprepared for this testy reprimand. An eager rose in him at Haskell's choosing to handly personalities just now when those two canoes were whipping up the Alooka.

Trying to fight down his impatience, he said: "Maybe it was tactless of me. But all along I've been—"

"Yes, certainly—acting as though you were O. G. around here. I didn't appreciate tactlessness when you had it. You can take notes on that when you haven't got it. I'll issue the orders I want about this patrol."

Abruptly he turned away to the wall behind him where a map of the Enlure country was tacked up. It was a big six-foot-square mosaic, it was the inspector's own handwork—a synthesis of government reports, explorer's sketches and unreliable Indian accounts. Though a few of the larger details were correct, in Alan's eyes it was a clumsy and ridiculous piece of cartography.

As he waited, swearing at this loss of precious minutes, Alan happened to see Constable Whipple over in a corner, making inventory, entries at a table. He said:

"Whipple, you'd better knock off on that and get into fatigues clothes. We'll take all the men on this patrol."

Whipple did not obey him, or stir, but waited for the inspector's orders. Alan later remembered, how Whipple scratched away with a pen, while Bill and Larry and Pedneault were down at the wharf hurriedly making ready for the expedition.

In helpless exasperation at Haskell's thought: "Good Lord, aren't you ever going to get through studying the crazy old map of the Enlure? It's a change in Haskell, this angry decision to run Enlure according to his own notions. Alan sensed an ugly hostility against him personally. He was quite well aware of the cause of that bad blood. He had not been blind these last months; he knew Haskell was madly in love with Elizabeth.

Presently, turning around from his map, Haskell said:

"I see that the Big Alooka, about a hundred miles north from its mouth, divides into two branches."

To hurry this talk up, Alan stepped around behind the desk, and pointed at the map as he spoke.

"Yes, that forks is called *Big Leavings*. But it's farther east than your map shows; it's never two hundred miles from the McMillan's trading post. Here's the Forks. The right branch leads southeast through this area."

"It should be marked timber line. The left branch goes north-east into the big muskox. About here is where the Thali-Azash should be marked. They're heading up this left branch, and the Thali-Azash is—"

Interrupting, Haskell demanded: "How do you know they're doing that?"

"I don't know, but it's a sensible guess. The Thali-Azash is a hiding place made to order, and they're never breaking for it."

"Humph! Maybe," Haskell lit a cigarette, and went on studying the map. Turning, he ordered:

"Take the launch and the five men, Baker, and go up the Alooka. If you don't overtake those handi before reaching the Forks, leave the launch there for your party, three men each, and follow up both those branches."

Alan objected. "But three men apiece will take the six who snatched a trick like that robbery—three might be able to handle them. They've got murder charges over them; they've got a fortune in their possession; they're going to put up a fight."

"Three men can handle them. Three men with the law behind them."

"A city cop may be a squad by himself," Alan interrupted, "but in the bush a man is a man. A legal bullet don't kill any deadlier than an outlaw bullet. Men who'll hold up a big steamer in broad daylight and shoot the sailors (I caught, aren't going to be paralyzed by the sight of a uniform. I believe my party shouldn't split. We ought to stick together and whip up that left branch. That's the fork they'll take."

"You're merely guessing," Haskell said coldly. "You don't know which branch they'll take. By my plan you'd

CHILDREN'S
CORDSCHECKED

VAPORIZERbe sure to overtake them on one branch or other."

"Yes, and have half my men shot. I'm responsible for them. I know what that kind of responsibility means. You're keeping me from orders I know are dead wrong."

Haskell tapped the table with his penknife. "I've given you my reasons, Baker, and listened to yours. If you refuse to obey orders, you'll stay here at the post, and I'll put Corporal Hardack in charge of this patrol."

Alan was not the fool to believe Haskell was bluffing. The man would keep him here and demote him from the post. He had been waiting months for just such a chance. It was a question of holding out against those ignorant instructions getting away with the men and making the best of it. Perhaps, after all, he would catch up with the thieves before they reached the Pole.

Beaten, weary of arguing, he gave in. "All right, inspector. I'll follow both branches. I'll be on the chase all day."

To cut off further delay he whirled abruptly on his heel and strode out. Bugeen came down from barracks. A little later, in the corner, instructions were given to the men, while Bill took his seat in the launch. Alan and Bill and Youngs were standing aboard guns, tent, grub and blankets.

On the terrace above, with a book in her lap, Elizabeth Spaulding watched calmly.

"Then Frank Pedneault, demoted driver of the powerful launch, slid into the wheel seat and slipped in the gears; and headed north, down the launch, toward the pole."

They were at last away on the pursuit. But all Alan's ardor had gone. All his long waiting, his hope of the chase had gone. Premonition whispered, and his whisper chilled him. As he glanced around at his men, at the comrades he was leading and was responsible for, he was thinking that tomorrow this time two or three of them might be dead—somewhere up the spurried Alooka.

(To Be Continued)

Plane With Robot Pilot

"Flying Laboratory" Is Being Tested
By Frank Hawks

"A flying laboratory with a robot pilot built into its mechanism, has been completed at Los Angeles and is ready for trial flights by Lieut. Commander Frank Hawks, speed pilot. The low-wing, 200-mile an hour monoplane is equipped with a mechanical device known as a robot pilot, which through air pressure device, will fly the ship while Hawks rests. After testing the craft he will fly it to New York.

Nearing End of Career

Woman Has Tended Lighthouse On
Brittany Coast 42 Years

One of the bravest women in France is surely Mme. Marie-Perthe Durand, the 80-year-old lighthouse keeper at the Island of Brehat on the Brittany coast. For 42 years Mme. Durand has kept the beacon burning brightly to warn mariners of the dangerous and tempestuous stretches along the coast of Brittany. Ever since her husband died 42 years ago Mme. Durand aided by her daughter has climbed the seventy odd steps to the top of the tower and trimmed the giant lamps that cast a light over the treacherous rocks.

Asked how she managed to light the beacon when she was ill, Mme. Durand said: "The lamps must be always litged at the proper time. Yes, two years ago, I had an attack of appendicitis, but despite that I had to climb up the 70 granite steps on my hands and knees and do my work."

This heroic woman is not frightened when the little lighthouse is surrounded by the angry seas in the winter time. "During the winter," she said, "giant waves beat over the lighthouse itself and as I look out through the wave washed windows of the beacon house I often see actively bent back when I see the giant rollers engulfing the entire lighthouse."

During the war what sights have been enacted before my eyes. There was the trawler, for instance, torpedoed by a German submarine right in front of the lighthouse. As when the beacon lights swept over the sinking ship I could see the poor junks jumping overboard into the sea at a nightmare as their screams sounded in my ears. I can bear anything but I cannot stand the horrible memory of the poor sailor who died at the lighthouse," she continued, "ships came right out of the night from nowhere and were dashed to pieces on the rocks."

Mme. Durand was appointed by the state to instruct five other women in lighthouse keeping and among her pupils was her daughter.

"As for me," she said, "my career is at an end. I will retire and I will lower my anchor calmly, and confidently for God knows I have given good instructions to those who will take my place."

General Knowledge

Children Very Often Ignorant of Most
Simple Things

The motor-come was passing the Brees of Balquidder, one of the famous beauty-spots of the Scottish Highlands, and the driver mentioned that Rob Roy's grave lay somewhere off the road.

A small boy and a Scottish small boy—sitting behind, turned to his mother and said:

"Who was Rob Roy?" he asked.

"Of course you know," the mother replied vaguely. "He invented porridge."

It may sound unbelievable, but the writer was present when the incident occurred, and can vouch for its truth. Rob Roy, unfortunately, too many young people have gaps just as starting in their knowledge.

As a result of an official report revealed the fact that many London schoolchildren didn't know where such famous places as Westminster Abbey, St. Paul's Cathedral and Buckingham Palace are to be found.

He also stated that a third of the children of Talington, one of London's most populous boroughs, had never seen the Thames, although the river is but an hour's walk from their homes.

There are thousands of other children in cities who have never seen the sea or a cow. Surely, it even haven't the remotest idea of what cows are for.

School journals are doing something to remedy this state of affairs. But there is still a great deal of ignorance of the simplest and most elementary things among our young people.

Yet general knowledge is supposed to be an important school subject. And the average child today does know about railways and motor-cars and all sorts of mechanical things.

This is all to the good, for we live in a machine age. But there must be something more to life than just machinery, and it seems a pity that the children aren't learning about the other things as well—Animals.

Small farms and gardens for the unemployed are being opened in Turkey.

Turkey has placed a "crisis" tax on all buildings in addition to the regular building tax.

War Debts And Credits

Cannot Be Divided Unless Allies Get
Credit For Their Dead

An article in the Montreal Star says it is a fair conjecture that the payment of the December instalments actually add to the amounts which the European nations will ultimately have to pay, if they go on paying. But how can they? Germany has definitely stopped. Nothing will start her again, she repudiates it as a great moral fervor because she is convinced that her dead always was unjust. If she does not pay, how can France and Great Britain raise the money? What they need is a moral fervor of their own which will declare to the world that the so-called war debts are simply an artificial and fantastic bookkeeper's effort to be divided into debts and credits—which cannot morally be so divided unless the Allies be given credit for their dead from Meuse to Chateau Thierry.

Accomplishments of Prince

Heir To British Throne Is An Expert
Conjuror

To few people know the full extent of the Prince of Wales' accomplishments. His ability as a dancer, is, of course, widely known, but he is lamented that he seldom finds a partner who can "tango" with the intricate rhythm so necessary for the full enjoyment of the dances. The Prince is also a part-master in the art of conjuring, and, in fact, had lessons from a world-famed magician a few years ago. With such tricks as turning a handkerchief into a dog and making rabbits from a hat are small fry to the Prince. His ambition in this line, however, is to be able to do the famous "needle-and-needle" trick.

Several needles are swallowed (sic), then a reel of cotton, and a glass of water. With the elucidation of these very magic words, "hey, presto," the needles are taken out of the mouth all nicely threaded together!

THE RHYMING
OPTIMIST

By Alice Michalski

ESCAPE

When life has vanquished me
And baffled, baffled, I stand
Where granite walls of misery
Rise high on either hand.
Do I in meanness loiter
Or do I bravely face the foe?
And weep for every broken vow,
Each pillaged hope's estate?

When life would crush and rend,
I have a secret stair
By which my spirit can ascend,
The still, white way of prayer;
And up and up I climb
From out my prison-place.
There I walk in robes of flame
Before Love's shining face!

Life cannot shut me in
In dungeons of despair,
For I may sure escape can win
Along the way of prayer!

Safeguarding The Reckless

Inexperienced Pilots No Longer
Allowed To Fly Trans-Atlantic
Flights

There will be universal approval of the action taken by the American government to prevent in future any trans-Atlantic flights by inexperienced pilots with inadequately equipped aircraft. The crossing of the Atlantic by air has become of no use whatever for purposes of scientific investigation and record. There is no longer other novelty or glory attaching to it. If the aviator gets across, well and good. If he does not, it is just another addition to the growing list of missing airlines. Both the trans-Atlantic flight and other hazardous ventures which have already been achieved by experienced and lucky aviators—Montreal Star.

Ashtina Cannot Last when the greatest of all asthma specifics is used. Dr. J. C. Ashtina's remedy is so thoroughly soundly deserves this exalted title. It has to its credit thousands of cases which other preparations have failed to benefit. It brings help to even the most stubborn cases. It is a sure patient to a condition of blessed relief. Surely suffering from asthma is no condition where a remedy like this is so easily secured.

Referring to George Washington, an American said to a Scotchman: "This was a great and good man, sir. A never passed his life in machinery, and it seems a pity that the children aren't learning about the other things as well—Animals."

The perfume of flowers is formed in the green part of the plant through the agency of chlorophyll.

Insurance companies in Greece have been ordered to contribute to the fire brigade's funds.

CANADIAN WOMEN
FIND DUSTING
DISTASTEFULDust cloths going into discard
Unpleasant to use; a bother to
WashAPPLEFORD WOODER PAPER
HAS GREAT VOGUE

Of all household tasks, that of dusting is the least appealing to the majority of women.

However, this condition, like many another connected with housework, is undergoing radical change. In a great many Canadian homes the women are discarding dust cloths entirely, and are using Appleford Wooder Paper instead, because it is so easy to use. It is a new paper, giving a better and much quicker job than the old dust cloth ever did.

This new, and extremely modern Wooder Paper, is made from clean rag, and soft paper, and is so easy to use. It is a new paper, giving a better and much quicker job than the old dust cloth ever did.

Appleford Wooder Paper is a ready-made package, twenty-five large sheets for twenty-five cents. You crumple a sheet into a ball and go over the surface, requiring attention. Then when one side is done, you turn the package over and use the other side. You have a quick and easy way of dusting.

And when you are through, there's no dust to shake out of cloth. Throw the whole Wooder Paper away and you've completed your dusting. It's so easy to use in half the time and with half the effort.

Wooder Paper is made by the makers of the famous PARA-SAN Heavy Waxed Paper, and is sold in Green Bay.

Special Offer

Most stores, hardware and department stores have Appleford Wooder Paper in stock. Write to the factory for a catalogue to supply you from the factory. Just fill in and mail this coupon.

Applied Paper Products, Ltd.,
Burlington, Ontario, Canada.
Enclosed find 25¢ for which please send me one full-size package of Wooder Paper and your 100¢ receipt for my order.

Little Helps For This Week

"He that dwelleth in the secret place of the Most High shall abide under the shadow of the Almighty."—Psalm 91:1.

They who on the Lord rely,
Neither shall they though danger's night
Lo, His sheltering wings are spread
O'er our faith's servant's head.
When they wake or when they sleep.

Angels guard their vigils keep;
Death and danger may be near,
Faith and love have brought to fear.
—Harriet Auber.

"There shall no evil befall thee,
Neither shall any plague come nigh thy dwelling." Is a promise to the fullest extent verified in the case of all "who dwell in the secret place of the Most High." Then sorrows are not evils, sicknesses are not plagues; the shadow of the Almighty extending far around those who abide under the shelter of His wings.

One of the commonest complaints of infants is worms, and the most effective remedy for them is Mother's Own Worm Expeller.

Atlas did away for a weight lighter of his day and age, which was before Mussolini kept a nation of forty-two million in line with his chin.

WORLD HAPPENINGS
BRIEFLY TOLD

Lawrence B. Jack, honor graduate of the University of British Columbia, has been selected as the 1933 Rhodes scholar for British Columbia.

J. Arthur Dupont, director of radio station CKAC in Montreal, has been "borrowed" by the Canadian Broadcasting Commission, to act as director of French language programmes.

William Blake, 11, of Lowell, Mass., sued his father for \$500 damages and won his case. The boy had been injured by an automobile driven by the elder Blake.

Seventeen carloads of frozen turkeys from Manitoba and Saskatchewan were shipped from Saint John for export. It was the first time such a large quantity had passed through that port.

British Columbia's losses by forest fires this year amounted to \$871,000. It was reported by Hon. N. S. Loughheed, Minister of Lands. Last year the loss was \$1,477,151, and in 1930 it was \$1,468,000.

Single unemployed men from the cities who have been placed on Manitoba farms for the winter under the \$5 a month relief scheme, total 900 since November 15, Arthur MacNair, of the relief commission, reported to the Manitoba government.

Prof. Augusta Picard, pioneer of the stratosphere, has been in Paris arranging passage to North America for a lecture tour. While he is there, he said, he will investigate the possibility of a balloon ascension in Canada.

"There is little likelihood the western section of the Trans-Canada Highway will be completed within the next two years," J. M. Wadell, chief engineer of the national parks of Canada declared in a address at Calgary.

One of the unexplained mysteries Dr. Robert A. Millikan found in his extensive aerial, marine and terrestrial observation of cosmic rays at Lake Comnet, Man., is that other places on the continent this year that the radiation is slightly more intense during the light.

Eleven of the 20 airplanes which will participate in a flight from Italy to the Chicago exposition next June, returned to their base after a successful test flight of 1,500 miles. The transatlantic flight is to be made in formation by way of Iceland, Greenland and probably Canada.

Receives Copley Medal

Royal Society of London Confers Recognition on Californian

Advice has been received that the Royal Society of London has awarded the Copley medal, highest distinction given by England for scientific research, to Dr. George E. Hale, of the Mount Wilson (Cal.) observatory.

The first American to receive it was Benjamin Franklin, to whom it was awarded in 1753 for his "curious experiments and observations on electricity."

The present award was for researchers in the magnetic field of the sun. First magnetic phenomena detected outside the earth were the magnetic fields in sun spots, discovered at the Mount Wilson observatory in 1908. Later, with the 150 foot tower telescope on Mount Wilson, the entire sun was found to be a magnet, with a magnetic field stronger than that of the earth but much weaker than the intense field in sun spots.

Vikings Were Short Lived

Died Between Ages of Thirty And Forty, Says Professor

Vikings who settled in Greenland centuries ago were senile and worn out at 40, is the belief of Professor F. C. Hansen, leading Danish anatomist.

He is now dissecting the frozen remains of vikings brought back to Denmark by the Nordland expedition to southeastern Greenland. They indicate the men were probably of stocky build, but not very tall and that they died between ages of 30 and 40 years. They suffered greatly from gout and rheumatism, the professor believes.

Church Shipped In Crates

A complete church, packed in 203 crates, was shipped to the Solomon Islands from Sydney. When erected it will be 85 feet long and 58 feet wide. It is a gift from Alfred C. Sage, of Victoria, as a memorial to his son, the Rev. Charles C. Sage, a missionary.

When a man can't do anything else, he can develop into a chronic kicker.

W. N. U. 1972

Saskatchewan Game Act

More Rigid Enforcement Of Its Provision Is Probable

Amendment to the Saskatchewan Game Act designed to enable the province to enforce more rigidly its provisions are expected to come before the Saskatchewan legislature at the next session.

One amendment, copied from the Manitoba Act, will permit of the confiscation of all hunting equipment and transportation facilities being used by hunters who are found guilty of infringements of the Game Act. This clause specifies that motor cars, aeroplanes, firearms, boats, skiffs, canoes or any and all appliances used for hunting may be confiscated to the crown.

Provision is also being made to create additional game sanctuaries throughout the province, it being understood that at least 22 such reserves will be provided for in the schedules to the new act.

Other proposed amendments, it was learned, will be the placing with the Lieutenant-Governor-in-Council the power to fix the bag limit for each type of game, and to determine the period of each season for game birds and big game. Previously this was determined by statute and was inflexible.

Becomes Inland Water

Dyke Makes Famous Zulu Sea Into Yael Lake

Famous Zulu Sea, in Holland, has been degraded from the status of a sea to that of inland water. It is now known as Yael Lake. The change came recently when a dyke, more than 20 miles long, connecting the provinces of North Holland and Friesland, was completed. The dyke separated the Zulu Sea from the North Sea. Queen Wilhelmina will inaugurate a new highway on the dyke in the fall.

Winnipeg Newspaper Union

"Do you know that the number on the back of your car is not the same as the number on the front?"

"Yes, I really had that number put on to save bother. It's the number of my motorist's car." The Humorist, London.

Had Double Grievance

Woman Lost Hat And Was Fined For Stopping Train

Everybody must have been tempted at some moment to pull a train communication cord; and it is therefore remarkable that the deed has not been committed more often.

Even when a train is stopped there is usually a very good reason, so that a recent case on the Scottish express is all the more noteworthy.

A woman passenger was leaning out of a window when her hat blew off. She pulled the cord, and the train stopped.

When she explained her awful loss to the guard, however, he most unfeelingly refused to let the train go back for the hat—and, to add to her sense of injury, the passenger had to pay the 45 penalty.

Idea Becoming Popular

England Takes Interest In Linking Up Namesake Towns

England is taking much interest in the Namesake Towns Association movement in which towns in that country link up with those in the United States having the same name. The linked towns are to be about the same size. Already 13 English towns have arranged to join with those in the United States. They are Bath, Beverly, Bristol, Dorchester, Gloucester, Newbury, Northampton, Oxford, Plymouth, Reading, Rochester, Uxbridge and Torrington.

Growth Of India

India's millions are steadily increasing. During the decade just ended, according to the census, the population has increased 34,000,000, to a total of 253,000,000. During the period covered by the census there has been no plague or serious famine. There are 940 females to every 1,000 males.

An inveterate smoker is one who can shave without getting lather on his cigarette.

Where Horses Are Cheap

One Sold At Quebec Fair For Forty-Five Cents

Whether the site of the Quebec Fair, held this year in the vicinity of St. Charles cemetery, had any effect on the price of the horses or not, the fact remains that the inhabitants of the district paid much less for their "rags" than did their forefathers.

Formerly held in the heart of the city, the fair has grown so popular that it has been forced into the outskirts. This year there were about 300 dealers and some 2,000 spectators. One horse sold for a pair of mittens, another for a watch, and a third for 35 cents. The prevailing price appeared to be from \$10 to \$20 and anyone asking more went home with the same number of equines as he arrived with.

Aged Banker Passes

Death Of Sir George Burn Is Reported At Ottawa

An outstanding Canadian banker and philanthropist, Sir George Burn, died at his home at Ottawa recently, aged 85. Although his health had not been good for some years, he was ill for only a short time before his death.

General manager of the old Bank of Ottawa, he held important positions in the banking life of the Dominion. He was president of the Canadian Bankers' Association in 1914, and occupied the post of vice-president for a period of 17 years. His associations with the Bank of Ottawa dated from the year 1880, when he was appointed general manager, until his retirement from that office in 1917.

One Explanation

The chances of a boy or girl going to high school, which in 1880 were only one in twenty-five, have grown steadily until at present they are one in two. It is possible that the increase in the number of those to be educated may have something to do with the mounting cost of education.

SUNDAY SCHOOL LESSON

DECEMBER 15

IDEALS OF THE TRUE CHRISTIAN

Golden Text: "If any man will come after me, let him deny himself, and take up his cross daily, and follow me." Luke 9:23.

Practical Reading: Philippians 3:3-14.

Explanations and Comments

The Christian's Devotional Life. Many cases and hard work through the hot summer months had so used up the strength and nerves of a Christian woman that she found herself doing and saying things that amazed her. She consulted the family physician. "Just what is the trouble?" she asked. "Your batteries need re-charge," was the reply.

"If you want to be on the safe side you would better renew those batteries right away," he continued. "And don't forget that you have two cell batteries. You have a physical and a spiritual store of cells that need renewing. Neither set will do without the other. The Sabbath, instead of being for you a day of rest and relaxation, has always been your busiest day, and I know that you have had no time for meditation and spiritual culture. It is the soul that feeds the body, and the soul may wear out just as well as the body may. Nothing has gone wrong with your body or soul but what can be cured by the other."

The Christian is the Home. To be a real Christian in a home often means self-renunciation. Controlled temper, decent demeanor, no matter how you feel, a radiant spirit under the most trying circumstances—even such simple elements of Christian home life are not easy. Carry a man's character in its minor phases before he suffers the epithet "great."

It is impossible to pretend to give more than a general definition, he declared. "My own personal view is that real greatness depends on three things: genius and character. In assessing whether a man is really great or not I study his character as much as his deed. It is not enough to know how he has acted at certain historical moments. I wish to know if he is vain, if he likes animals, if he is fond of music. His personal life is as important to me as any acts of statesmanship."

Ludwig believes that there is a physical law about greatness. Men are born with physical and mental traits which inevitably single them out for fame, he says. He pronounced Mussolini great because he combines energy with imagination. He attaches much significance to the love of music and points out that Lincoln, Blumstein and Napoleon all loved music.

Recipes For This Week

By Betty Barclay

GINGER PUDDING

1 Junket tablet
1 pint milk
1 tablespoon cold water
3 tablespoons sugar
1/2 teaspoon lemon flavoring
1/2 cup whipping cream
Ginger cookies

Break a small ginger cookie (or left-over cake) into each dessert dish. Dissolve junket tablet in 1 tablespoon cold water. Add sugar to milk, also lemon flavoring. Warm to lukewarm (130 degrees Fahrenheit)—not hot and remove from stove. Add dissolved junket tablet. Stir a few seconds, and pour at once over ginger cookies. Chill in refrigerator. Serve with whipped cream and a bit of grated preserved ginger.

CUMBERLAND SAUCE FOR DUCK

(Serves 4-6)

1/2 cup orange juice
1/2 cup lemon juice
1 cup powdered sugar
2 tablespoons currant jelly
Grated rind 1 orange
Grated rind 1 lemon
1 tablespoon grated horseradish
Mix ingredients; beat thoroughly; heat and serve.

Travels In Invalid Chair

Disabled Soldier Has Covered 20,000 Miles In Last Few Years

If H. Jervis, of Thorpe Bay, England, has travelled 20,000 miles in his invalid chair. Since being discharged from hospital in 1924, he has bowled all over England and Scotland. He also took the chair to France and wheeled his way over old World War haunts there. Jervis was a sergeant-major in the Royal Engineers, and was blown up at Paschendaele Ridge in 1917. He spent seven years in the hospital, and now is partly paralyzed, is minus a few ribs and wears a silver plate in his skull.

More Gold From B.C.

Production of Gold in British Columbia is expected to exceed \$4,000,000 this year, according to figures issued by the Department of Mines.

The gold yield increased by 26 per cent over the previous year, and is estimated at \$3,800,000. Placer gold, worth \$20,000 last year, will exceed \$200,000 this year.

Most Wonderful Man

Famous German Biographer Says, Edison Had Both Genius and Character

Who are the world's greatest living men?

It's a hard question, but Emil Ludwig, famous German biographer of history's greatest men in mind and action, tried to answer it during his recent visit to London.

Although unable to give definite opinions as to the world's greatest, he admitted with reservations that Mussolini, Shaw and President Masaryk, head of the Czechoslovakian government, had traits of greatness from different angles.

When asked who was the greatest man he had ever met, Ludwig replied without hesitation, "Edison. He was the most wonderful man I have ever known. Not only was he a great inventor, but he was truly great in spirit and personality."

The famous German biographer is now writing a book on the contemporary scene. He has been living in intimate contact with many of them for months. Recently he spent two weeks with Mussolini in order to study the complete portrait of his personality.

But when it came to a great Englishman for inclusion in his work, no one could suggest a man for the distinction, a fact which caused Herr Ludwig considerable pain and disappointment.

Ludwig has a formula for greatness. Unlike the standard of greatness employed by the world, he goes deeper. He studies the mere accomplishments of prodigious states. He studies a man's character in its minor phases before he suffers the epithet "great." It is impossible to pretend to give more than a general definition, he declared. "My own personal view is that real greatness depends on three things: genius and character. In assessing whether a man is really great or not I study his character as much as his deed. It is not enough to know how he has acted at certain historical moments. I wish to know if he is vain, if he likes animals, if he is fond of music. His personal life is as important to me as any acts of statesmanship."

Ludwig believes that there is a physical law about greatness. Men are born with physical and mental traits which inevitably single them out for fame, he says.

He pronounced Mussolini great because he combines energy with imagination. He attaches much significance to the love of music and points out that Lincoln, Blumstein and Napoleon all loved music.

Reduce Working Hours

To Aid Unemployment

Twenty-Five Million Workers Create World Crisis for League Solution

Proposals for reduction in hours of labor throughout the world have been laid before the League of Nations organization of the League of Nations according to word received by the League of Nations office in Canada.

With 25,000,000 people unemployed the situation has assumed the nature of a crisis demanding immediate action and at the recent League conference it was decided to place the matter before the Tripartite Preparatory Conference in January. There was some opposition but the Canadian delegates, Tom Moore and Dr. Riddell, voted for immediate action.

The League endorsed a 48-hour work proposal for 1933, but a further reduction, it is believed might aid present employment and help relieve the situation. The 1919 proposal was a permanent measure. The conference will consider whether still further reduction should be taken as a temporary measure to relieve the crisis or a desirable permanent.

"In 1919 it was a social problem," said a Danish delegate. "The object being to reduce the hours of work in order to prevent excessive fatigue for the workers; today the problem is an economic one,—an increase in the amount of available unemployment and to remedy the crisis."

A German representative urged immediate action by the country. Spending three thousand million marks on unemployment relief. A French delegate asserted there was intense anxiety in all countries with respect to unemployment.

The wage reduction question as a commitment to the reduction of hours will also be considered. The British government announced its advocacy of a full examination of the reduction problem so long as the standard of living of the wage-earning population was not reduced.

A man at the North Pole is about 13 miles nearer the centre of the earth than one at the equator.

+ Do You Know? +

Photograph, Canadian National Trust

WHAT in the Botanical Gardens, Trinidad, British West Indies, there is a tree known as the Cannon Ball Tree? It gets its name from the shape and weight of its fruit. The picture shows a large cannon ball which weighs about three pounds. The tree grows to a height of 150 feet and the bark is used extensively in tanning.

UNITED STATES INSIST WAR DEBT BE PAID

Washington.—The United States again insisted on payment of the December 15 war debt instalment, in its latest note to Great Britain, but left the way open to have it done in the manner considered least disruptive to world finance.

Secretary of State Henry L. Stimson's communication expressed confidence the United States Congress would "be willing to consider any reasonable suggestion" from Great Britain "which will facilitate payment" of the \$85,500,000, due a week from today. It also revealed informal suggestions have been made to Great Britain as to how the payment might best be met, but did not show the nature of the proposals.

The note was studied with interest on Capitol Hill, but leaders were cautious in commenting on the reference to the acceptability of the new form of making the transfer.

The reply to Great Britain, said Mr. Hoover, indicated the U.S. was ready to survey the international economic situation, and noted that the payments "have a close relationship to the problem of recovery."

Secretary Stimson said he welcomed the suggestion in the British note of December 17 for a joint examination of the world economic situation in preparation for the international monetary and economic conference.

He expressed a belief that "there are important avenues of mutual advantage which should be thoroughly explored," adding:

"Such an examination does not imply cancellation. In such an examination there would necessarily be consideration of other factors, such as the tangible compensation available for the expansion of world markets for products of American agriculture and labor. And you will understand that the problem of foreign debts has in the American mind a very definite relationship with the problem of disarmament and the continued burden which competitive armament imposes upon the entire world."

Stimson commented on implications in the British note that the money loaned by the United States was spent entirely for destructive purposes, and disagreed with that view.

"Of the amount expended in the United States by our debtors after we entered the war, both before and after the armistice, most of which was borrowed from the United States government on war and relief loans, less than one-third was spent for munitions and armaments," he replied.

"Very large amounts were spent for food, tobacco, etc.; for cotton, etc., for relief and other supplies sold on credit; for purchases of commercial loans, and for interest. Much of the food, tobacco, etc., relief and other supplies sold on credit were resold by the governments for use of their own civilian population. In certain cases these supplies were actually resold and the funds turned into the treasury of the debt governments.

"The amounts used to purchase currencies were in reality loans by the United States to the allied countries which were no doubt expended by them, in part at least, in countries other than the United States; they served to maintain the value of allied currencies. Some of the loans made after the armistice were vital to the recovery and indeed, to the very existence of the borrowing nations."

Women In Public Life

Lady Nancy Astor Talks To Women Members Of U.S. Congress

Washington.—Vivacious Lady Nancy Astor, British M.P., talked to international matters before the United States House Foreign Affairs Committee, but she did foregather, in the interests of familiarity, with all the women members of congress.

A greater place for women in public life was her theme. She also urged more attention to legislation benefiting women and put in a plea for the federal children's bureau.

The plan for a quiet appearance of Lady Astor before the committee concerned with House legislation touching on European matters was a novel idea when it attracted international attention.

W. N. U. 1972

Arms Conference

United States Representatives Reveal Results They Are Striving To Attain

Geneva, Switzerland.—United States representatives at the five-power disarmament negotiations disclosed some of the "concrete results" which they are striving to have incorporated in a proposed preliminary protocol.

- Aims of the delegation include:
- 1.—Reduction in the size of land and air forces.
 - 2.—Definition of the term "military defence troops" as apart from colonial troops.
 - 3.—Abolition of movable artillery larger than 105 centimetres in calibre.
 - 4.—Limitation of the tonnage and number of tanks.
 - 5.—Limitation of the number and size of military aeroplanes and the fullest publicity regarding their size and type.
 - 6.—Complete abolition of chemical warfare.
 - 7.—A naval treaty between France and Italy.

8.—Recognition of the principle of state supervision of the manufacture of arms and the trade in arms.

It stressed that the proposals did not exclude regional agreements which might later be incorporated in a general disarmament treaty.

The representatives of the five powers—Great Britain, France, United States, Germany and Italy—met for only an hour as many of them wished to attend the session of the League of Nations assembly at which the Manchurian question was being considered.

World Trade Wanes

Three-Fifths Of Trade Is Destroyed Since 1929

Toronto.—Three-fifths of the world's trade has been destroyed since 1929, and the destruction is still going on, J. A. McLeod, general manager of the Bank of Nova Scotia, said recently.

In a statement outlining a study of world trade conditions made by the bank, Mr. McLeod pointed out while Canada has no direct interest in the present discussions regarding war debts, her indirect interest is enormous, because her position among the great trading nations, Canada, he said, did not need to borrow from 1931 onward in the United States to finance war expenditure.

Statistics from 20 nations, including Canada, the United Kingdom and the United States, mentioned Mr. McLeod's statement, show that for the 12 months ending September 30, 1929, aggregate gold value of all merchandise exports was \$24,500,000,000. In the 12 months ending September 30, 1932, the figure for combined exports was \$9,900,000,000, a loss of \$14,600,000,000, or 60 per cent.

North America shows the greatest shrinkage, according to the statement, with a 67 per cent. decline. Decreases here: Asia, 64 per cent.; South America, 61½ per cent.; Australia, 60 per cent.; Europe, 50 per cent.

Agriculture Must Be On Profitable Basis

One Of Greatest Essentials To Revival Of Business

Chicago.—President Henry Harman of the United States Chamber of Commerce described indications of reviving business, but said the restoration of agriculture "to a self-respecting and profitable basis" was one of the essentials if prices and employment were to increase.

Mr. Harman brought the viewpoint of business before the annual convention of the American Farm Bureau Federation.

Grain Movement Helps

Many Railworkers Have Been Given Work In Maritime

Halifax, N.S.—More than 200 railworkers in the maritimes have been given employment since grain and other commodities started to roll eastward toward Halifax from upper and western Canada. Grain is still pouring into the bins at the elevators as fast as it can be handled. Five special trains pulled into Halifax within 24 hours and more are scheduled to arrive shortly.

Boy Accused By Chum

Detroit.—Gilbert Stuart, 12 years old, who had convinced authorities this boy killed his father was accidental, was back in the juvenile delinquency hall accused by a schoolmate of having planned to rob his father of his week's pay and embark on a career of crime.

Saskatchewan Game Act May Have Amendment

To Prohibit Rifle Use For Shooting Game Birds

Saskatoon, Sask.—Prohibition of the shooting of game birds with rifles may be sought by the Saskatchewan Fish and Game League through amendment of the Saskatchewan Game Act, it was stated by A. E. Bence, K.C., president of that body.

Mr. Bence said he had received numerous complaints from farmers throughout the province requesting that legislation preventing the destruction of game birds by rifle fire be sought at the next session of the legislature.

It was pointed out by Mr. Bence that while coveys of prairie chicken and wood partridge can be picked off with a rifle, which it would be impossible to shoot with a shotgun.

Farmers, according to Mr. Bence, are fearful that the pheasant crop raised last year will be practically wiped out unless some provision against rifle use, comprising game birds is inserted in the act.

BRITAIN TALKS OF IMMIGRATION TO DOMINIONS

London, Eng.—The House of Commons passed a resolution urging the government to take immediate steps looking toward co-operation with the dominions in considering schemes for migration within the British Empire.

Several members who urged the government consider new migration schemes asked what had been done under this head at the Ottawa Empire Conference last summer.

Sir J. Stender Allen, conservative, reiterated the frequently repeated assertion that numerous persons deported from Canada had been made criminals in order to be sent back to the United Kingdom.

J. H. Thomas, Dominions Secretary, replied to questioners by saying delegates to the Ottawa conference had been busy hammering out schemes for improvement of trade which would lead to prosperity in the dominions and increase their capacity to absorb immigrants from this country.

Mr. Thomas said he hoped the report of prosperity in the dominions was not far distant and that when it came the problem of migration would be revived.

Industrial Insurance

Would Provide Fund To Pay Cost Of Unemployment Relief

Winnipeg, Man.—Enactment of legislation to provide some form of industrial insurance to provide a fund to pay the cost of unemployment relief was recommended to the provincial government at a convention of the Union of Manitoba Municipalities. Resolutions favoring the insurance scheme and a reduction of interest charged on loans to municipalities received unanimous support. W. C. Wroth, of Ellice, Man., was re-elected president of the union.

REJECTS FUND ON US

Bank Manager At Vancouver Over-takes Man Who Held Up Employee

Vancouver, B.C.—G. R. Devereaux, manager of the Royal Bank of Canada branch at 16th Avenue and Oak Street, boarded a street-car to capture at gun point a man who had just held up the bank and taken \$270. The man gave the name of Harold Knight, 24, and was later charged with robbery with violence.

"If you get this bottle of nitroglycerin if you don't hand over the money," the man said to Devereaux, as he held up the branch. Seizing the money as it was passed over to him by W. C. Scott, teller, the bandit ran out and caught an eastbound street car which had just swung around on 16th Avenue. Devereaux followed him with a gun and stopped the street car as it was moving away. Knight was on the front platform and Devereaux took him off at gun point, lined him up against the outside wall of the bank, keeping his gun to the man's ribs and ordered him to keep his hands high. Constable Albert Barker arrived within a few minutes and handcuffed the prisoner.

Golfer Escapes Bandits

British Resident Of China Uses Golf Clubs With Telling Effect

Victoria, B.C.—When W. N. Hansell, British resident of Manchuria, was playing a round of golf on the Harbin course, he was attacked by bandits who sought to seize and hold him for ransom, but he fought them off with his clubs.

His assailants, however, did not flee before they had wounded him in the arm.

With his wounded arm in splints and supported by a sling, Mr. Hansell reached here aboard the "Empress of Canada," en route to London, with his wife and daughter.

The golfer put up unexpected resistance and used his steel golf clubs with telling effect on the hands of the bandits as they closed in upon him. The attention of others on the course was attracted and as help was in sight the bandits made off.

Use Canadian Wood

Lumber From Canada To Be Used In British Buildings

London, Eng.—Announcement was made in the House of Commons that Canadian soft woods are to be used in place of European woods in all tender for building contracts that come under the supervision of the commissioner of works.

W. Ormsby-Gore, commissioner of works, told the House he had been advised that there would shortly be available supplies of the Canadian products that would be used for carpentry, internal joinery and general building purposes.

Alberta Oil Output

Edmonton, Alberta.—Increase of 304,074 tons in coal production in Alberta from 3,435,961 tons in the first ten months of 1931 to 3,739,975 tons for the ten months of 1932 ended October 31 was shown in a report issued by Hon. R. G. Reid, Alberta Minister of Lands and Mines. The output for October, 1932, was 550,751 tons, an increase of 148,869 tons over October, 1931.

Bandit Captured

Bank Manager At Vancouver Over-takes Man Who Held Up Employee

Vancouver, B.C.—G. R. Devereaux, manager of the Royal Bank of Canada branch at 16th Avenue and Oak Street, boarded a street-car to capture at gun point a man who had just held up the bank and taken \$270. The man gave the name of Harold Knight, 24, and was later charged with robbery with violence.

"If you get this bottle of nitroglycerin if you don't hand over the money," the man said to Devereaux, as he held up the branch. Seizing the money as it was passed over to him by W. C. Scott, teller, the bandit ran out and caught an eastbound street car which had just swung around on 16th Avenue. Devereaux followed him with a gun and stopped the street car as it was moving away. Knight was on the front platform and Devereaux took him off at gun point, lined him up against the outside wall of the bank, keeping his gun to the man's ribs and ordered him to keep his hands high. Constable Albert Barker arrived within a few minutes and handcuffed the prisoner.

Three Wounded In Explosion

Discovered Souvenir Bomb Cause Of Accident In Toronto

Toronto, Ont.—Explosion of a discarded souvenir bomb caused the death of three men in hospital here seriously wounded, two of them lifted six feet by the explosion, and the third, 50 feet away, struck by a flying piece of shrapnel. A flash of flame and a shower of debris accompanied the explosion.

Harry Belafant, 17, and John Mykhaluk, 39, his stepfather, were coming a dump for bottles and rags when the young picked up a cylindrical object, unscrewed the cap and set it rolling underneath. He pulled the ring and a few seconds later a terrific explosion blew him and his stepfather into the air.

HOOVER MUST BOOST TAXES TO BALANCE BUDGET

Washington.—Stashed \$500,000,000 more below this year's appropriations, but depending upon taxes and economies which the United States congress has firmly refused to impose, the final budget to be drawn up by outgoing President Herbert Hoover was submitted recently.

To avert a deficit in 1933, the president told congress, it would be necessary to impose a general manufacturer's sales tax of 2½ per cent; cut government expenditures 10 per cent; raise now; slash compensation and pensions to veterans, and retain the gasoline tax of one cent a gallon.

The present fiscal year, said Mr. Hoover, will end with a deficit now estimated at more than \$1,140,000,000.

The only way he could see to balance next year's budget, after the departments had completed cuts netting \$387,553,000 of savings, was to enact legislation to save \$182,000,000 more and to raise \$192,000,000 additional revenue.

The president was silent on war debts and made no mention of prohibition or of beer. The latter was not estimated in the estimates of internal revenue receipts of the treasury.

Congress received the new budget perfunctorily. The opening pages of the message were read and then the bulk document was referred to the appropriation committees. The chairman of the House Appropriations Committee said most of the reduction in the budget was in unemployment relief benefits.

Trapper Is Murdered

Coroner's Jury Decides Manitoba Victim Met With Foul Play

Pine River, Man.—A coroner's jury investigating the death of John Dhumik, 27-year-old trapper, who was found riddled with gunshot wounds in a snowbank along his trap line on Tuesday, December 6, has decided he was murdered by some person or persons unknown.

The jury heard evidence of the young man's relatives who found him not far from his parents' home after he had been missing from home all night. He died before regaining consciousness and Royal Canadian Mounted Police have been unable so far to discover any trace of the murderer.

NO PREFERENCE ON SHIPMENTS ROUTED VIA U.S.

New York.—Interest of Canadian, United Kingdom and United States grain shippers has been shifted from Liverpool to London, England. Refusal of Liverpool customs authorities to allow the six cents per bushel preference on a test shipment of Canadian wheat, billeted through United States ports, caused the shift in the scene of this latest wheat drama.

Adverse action on the part of the Liverpool officials "was fully expected" by the International Export Association officers, it was said today. Foreseeing this ruling, they had photostatic copies of the certificates and bills of lading placed before the head of the British customs department several days ago.

"I expect to get a ruling within a day or two," said the association secretary. "Today's ruling was little more than a technicality. We fully expected it."

While one official of the association expressed the belief there was a chance the London headquarters would reverse the Liverpool decision, another official said he "believed the Liverpool ruling was equivalent to definite refusal to grant the preference on Canadian grain shipped through United States."

France Must Pay

United States To Insist On Settlement Before Dec. 15

Washington.—United States reply to France's second note appealing for debt relief was handed to Ambassador Chandel by Secretary of State Henry L. Stimson.

The note was formulated in extensive conference between President Herbert Hoover, Secretary of the Treasury Ogden Mills, and Mr. Stimson.

It was believed that the communication would be followed by payment of France's December 15 instalment on her war debt.

Ambassador Chandel called at Mr. Stimson's suburban home, where the note was presented to him there.

Trade Treaty Approved

Irish Free State Guarantees Lowest Tariff Duties To Canada

Dublin, Irish Free State.—The Daily Aheran has given its approval to the Irish Free State's Ottawa conference trade pact with Canada.

Ottawa.—Canada's trade treaty with the Irish Free State was one of the four negotiated by this country at the Imperial Economic Conference. It guarantees to Canada the lowest tariff duties imposed by the Free State against any country, with the exception of the Free State's rates applicable to goods from the United Kingdom. Canada ratified the treaty 10 days ago.

Western Winter Fairs

Dates Are Set At A Meeting Held In Regina

Saskatoon, Sask.—Saskatoon's winter fair will be held this year during the week beginning March 27, it was announced by Manager S. W. Johns. The dates for all class "A" fairs in western Canada was set at a meeting held in Regina recently.

The Brandon fair will start March 13, running for six days. Regina's winter fair will open on March 20, while the Calgary winter fair will be in operation during the same week as the Saskatoon fair. Edmonton's winter fair will open on April 3.

Had Many Adventures

Mrs. Wandersell First Woman To Go To Front Range To Pekin

Long Beach, Cal.—Mrs. Glivia Wandersell, former Winnipeg woman and widow of Captain Walter Wandersell, mysteriously slain about 1910, had the distinction of being the first woman to drive from Europe to Pekin.

She rejoined Wandersell in Asia. Together they toured the eastern hemisphere, lecturing and making motion pictures. Their last adventure was in South America, where they joined the search for Col. Fawcett, missing British explorer.

A Husky Youngster

Chicago.—At the age of one year, Edward Ulfelt Vogt plays with an eight-pound weight; swings three-pound dumbbells and carries a nation. He's the son of Mrs. Edward J. Vogt.

ANOTHER STAR REMEMBERS GOOD ADVICE

It won't be long now until the festive season is upon us. At this time one can offer no more sound advice than to repeat the old slogan: "Do your Christmas shopping early." Here is lovely Marion Nixon, screen star, who believes in being well ahead of schedule. Not only has she done her buying, but already she has dispatched most of her presents. She is shown about to dispose of another cargo.
